

Objective Checklist

Please mark any of these to indicate being done if you complete it.

1. Improve quiz tracking. Allow user to select and take a quiz from a list of defined quizzes. Every "Study Topic" will be a default quiz on this list. Defined quizzes will be tracked to show the user their progress over the course of being a user.
Also Allows a user to define and save a custom quiz. Custom quizzes will work just like the default quizzes, except will include any filters that users wish to apply. **Nils Johnson**

11/7 - revision. Users will create their quiz just as before. (no predefined quizzes) I will implement it so that when they "review", they have better read-out of how they did (with a chart, showing progress), and then they will be able to take that exact quiz again.

2. Add "Drug of the Day" feature. Every time the app is opened, the user will be presented with a random drug. Once shown, it will not appear as Drug of the Day again until all other drugs have been shown. Drug of the Day will display all applicable Medicine attributes. **Nils**
3. Improve search functionality. When the user presses the search button, make the keyboard disappear, and the Clear Search button reset the search. **Nelson**
4. Update database to include current drugs. **Sebastian**
5. Add a random sorting option in the list of actions from the main menu "Sort" button **Sebastian**
6. Add "About" and "Legal" portions of app. **Nelson Tse**
